

## PRAMODA CHANDRU

[pramodcgwd50@gmail.com](mailto:pramodcgwd50@gmail.com) | +1 (312) 752-5363 | Chicago-IL | [LinkedIn](#)

### EDUCATION

**Illinois Institute of Technology, Chicago, IL**

Expected December 2024

**Master of Science in Computer Science, - 3.5 GPA**

Courses: Software System Architecture, Enterprise Web Applications, Mobile Application Development, Software Project Management, Software Engineering, Parallel and Distributed Processing, Intro to Machine Learning

**Visvesvaraya Technological University, Bengaluru, India**

August 2010 - June 2014

**Bachelor of Engineering, - 3.2 GPA**

Bachelor of Engineering in Information Science and Engineering

### TECHNICAL SKILLS

- **Languages/OS:** Java, JavaScript, Typescript, Groovy, Dart, HTML, CSS, SQL, Windows, Unix, Linux, macOS
- **Web Development:** Angular, NgRx, Spring Boot, Flutter, REST, Node, Express, React, Microservices
- **Databases:** RDF, MySQL, MongoDB, PostgreSQL, Oracle
- **Tools and Frameworks:** Git, GitLab, JIRA, Jenkins, Confluence, DSxR&D, Selenium, Geb, Junit, AWS (EC2, S3, ECR), Docker, Kubernetes, Apache Kafka

### PROFESSIONAL EXPERIENCE

**Software Engineer**

**Dassault Systemes, Bengaluru, India**

February 2015 - January 2023

**Formulation Development Team**

- Developed and implemented key features for the Formulation web application, streamlining formulation design & optimizing formulation calculation, achieving a 30% reduction in sourcing costs, 0% formulation non-compliance recalls, and a 20% decrease in development time.
- Engineered and refined a suite of interactive frontend components using Angular and NgRx, resulting in a 25% improvement in user interaction speed and a significant enhancement in overall application responsiveness and usability.
- Built and optimized a robust Java/JavaScript back-end system for efficient formulation data management. Leveraged efficient query design to streamline data access, resulting in a 20% faster retrieval speed and improved user experience.
- Actively participated in Agile ceremonies such as sprint planning, daily stand-ups, sprint reviews, and retrospectives to ensure alignment with project goals and priorities.

**Biovia Automation Team**

- Spearheaded the development of a robust automation framework for web applications, contributing to a notable 40% reduction in manual testing efforts and a significant 25% improvement in test coverage.
- Leveraged REST Assured framework to automate prerequisites, which led to 50% reduction in script execution time and an 80% decrease in script failures.
- Volunteered to optimize Jenkins automation batches through a multi-node configuration, achieving a staggering 50% reduction in execution time and enabling faster continuous integration and testing cycles.
- Empowered teammates through code review sessions and technical guidance on best practices, leading to a 20% reduction in code defects and a notable 40% increase in script execution success rate.

**Enovia Enginuity Team**

- Implemented a comprehensive suite of over 500 functional and non-functional tests, streamlining the testing process by 20% while achieving a 10% increase in test coverage, ensuring thorough quality assurance.
- Led the effort to resolve critical usability issues in collaboration with the development team, resulting in a 25% reduction in customer-reported problems and a 15% increase in customer satisfaction.
- Employed UFT for automating critical Enginuity tests, resulting in a 30% boost in overall test coverage.
- Managed the development and maintenance of E4ALL and 3DExperience environments, ensuring accurate and efficient testing of software applications and reducing testing time by 20% and a significant 30% decrease in critical post-release bugs.

### PROJECTS

**RepairMate | React, JavaScript, HTML, CSS, Express.js, Node.js, MySQL, MongoDB**

August 2023 - December 2023

- Created a web application featuring a user-friendly interface using React and JavaScript and oversaw the development of modular components for web pages, user profiles, and an intuitive booking process with seamless payment integration.
- Led the engineering and deployment of the backend infrastructure utilizing Node.js and Express, managing user requests while integrating essential business logic.
- Established seamless communication with MySQL and MongoDB databases for user data, service listings, reviews, and bookings.

**Model-Driven Vending Machine System Implementation | Java, Design Patterns**

January 2023 - May 2023

- Spearheaded the design and development of modular Vending Machine components using Java and MDA principles. Leveraged State, Strategy, and Abstract Factory patterns to enhance code maintainability, flexibility, and system efficiency.
- Optimized payment processing with the Strategy pattern, aiming to optimize transaction efficiency.
- Enhanced system maintainability and scalability through state management and efficient product dispenser creation using the Abstract Factory pattern.

**Yahtzee Game | Flutter, Dart**

- Crafted a single-player Yahtzee game using Flutter and Dart, implementing stateful widgets and state management techniques (ChangeNotifier) for a dynamic and user-friendly experience.
- Designed and implemented core game mechanics like dice rolling, holding dice, and scoring calculations, ensuring adherence to Yahtzee rules.
- Modularized the UI code with separate widgets for the Yahtzee game container, dice display, and scorecard display, promoting code maintainability and reusability.
